

ELITE SERIES

SONOS® Arc

The Elite Series for the Sonos® Arc, created by the master engineers at NextLevel Acoustics, combines all of the aesthetics and build quality you have come to expect from Elite enclosures (Playbar/Beam) with the added benefit of preserving Atmos performance. Due to the upward-firing Atmos speakers, a flush installation would normally cause the soundwaves to be impeded by the underside of the display making Atmos performance nearly impossible. The Elite Series solves this issue by installing a precisely calculated grooved reflector panel that directs the upward-firing speaker's soundwaves out the front-facing grille allowing for unobstructed Atmos functionality. Not only will you be able to achieve a fully integrated flush installation, but you will also keep the integrity of Atmos performance while doing so.

FEATURES INCLUDE:

- Available for 65" displays and greater (e.g., 100")
- High-gloss piano black / Matte Black (additional finishes available upon request)
- Flush to the bottom of the display installation
- Interior main reflector panel re-focusses top-firing speakers out the front-facing grille ensuring continued Atmos performance
- Main reflector panel precisely engineered grooves direct the top firing speaker soundwaves away from the Sonos® Arc without any reflection back
- Side reflectors positioned inside the enclosure re-focus the Sonos® Arc's side-firing drivers back towards the listening position
- Strategically placed sound dampening material
- Elite Series tapered side profile
- Removable magnetic grille is partially inset for additional structural integrity
- Mesh weave grille material supports full IR passthrough
- IR grille notches available
- Dual cable management access points (top and back)
- MDF and Baltic Birch construction
- Streamlined installation using the UM-1 bracket or direct to wall mounting options

TAKING THE SONOS Arc TO THE NEXT LEVEL

Elite Arc Flush 65" TV
